The ECM regulates four main parts of your vehicle's operating systems: air-fuel ratio, idle speed, variable valve timing, and ignition timing. In terms of the air-fuel ratio, the ECM uses sensors to regulate the oxygen to fuel ratio detected in your car's exhaust to detect an engine rich/lean reading.

Motor or engine oil flush is an engine oil cleaner that is used to remove sludge build up from the engine. It is different from many other additives in that it does not stay in the engine during operation. Instead, motor flush is generally added just before an oil change and run through the system by idling the engine.
