supply - Like most electronic systems, noisy and/or dirty power supplies can cause strange behavior in an RFID system.

Clean, regulated power sources are

recommended. Check

for line of site - Open-

air readings without

other objects

obstructing the line-of-

site between the

reader and the tag can

improve outputs.

RFID Basics -

learn.sparkfun.com

"The SparkFun RFID Qwiic Kit is a simple, yet all-in-one I2C based RFID starting point for the ID-3LA, ID-12LA, and ID-20LA readers. Simply plug a reader into the headers and use a Qwiic cable to connect to any Qwiic enabled development board, then scan your 125kHz ID tag and the unique 32-bit ID will be shown on the screen."

Simply insert the RFID reader main board into a solderless

breadboard as shown below. Then use

jumper wires to

connect the second and third pins at the

top-left of the RFID

board to Arduino 5V

and GND respectively.

The RFID coil connects

to the two pins on the

top-right (they can go

either way).
