Strawberry is a very popular fruit. The strawberry genus (*Fragaria*) has emerged as a model system for various fundamental and applied research in recent years. Here, by using high-throughput sequencing technologies, we provide de novo whole-genome sequences for five wild strawberry species and genome resequencing data for 128 additional accessions of key species.

Evolutionary history and pan-genome dynamics of strawberry ...

We demonstrate noninvasive detection of action potentials with single-neuron sensitivity, including in whole organisms. Our sensor is composed of quantum defects within a diamond chip, which detect time-varying magnetic fields generated by action potentials. The sensor is biocompatible and can be brought into close proximity to the organism without adverse effect, allowing for long-term ...

Cryolipolysis is the non-invasive reduction of fat with localized cutaneous cooling. Since initial introduction, over 650,000 cryolipolysis treatment cycles have been performed worldwide. We present a previously unreported, rare side effect following cryolipolysis, paradoxical adipose hyperplasia. A ...

Paradoxical Adipose Hyperplasia After Cryolipolysis

The glass frogs are frogs of the amphibian family Centrolenidae (order Anura). While the general background coloration of most glass frogs is primarily lime green, the abdominal skin of some members of this family is transparent and translucent. The internal viscera, including the heart, liver, and gastrointestinal tract, are visible through the skin, hence the common name is given as glass frog.

Glass frog - Wikipedia

Introduction. Magnesium is the eighth most common element in the crust of the Earth [1, 2] and is mainly tied up within mineral deposits, for example as magnesite (magnesium carbonate $[MgCO_3]$) and dolomite. Dolomite $CaMg(CO_3)_2$ is, as the name suggests, abundant in the Dolomite mountain range of the Alps []. The most plentiful source of biologically available magnesium, however, is the ...
