Reliability Analysis applied on centrifugal pumps

Reliability Analysis Applied On Centrifugal The reliability analysis shows that an improvement in the NGL centrifugal pumps system is required, if an immediately action is not taken the gross margin is going down year by year. The cost analysis is indicating that an investment in this system is well justified to improve the reliability figures.

Reliability Analysis Applied On Centrifugal Pumps

This research article presents a methodology to identify the critical component of a centrifugal pump and analyze its reliability. Failure analysis of major components of the pump was done, risk priority number was calculated and critical component was identified. The critical component was considered to be composed of two sections. Its reliability was analyzed by mathematical modeling of the ...

Reliability Analysis Applied On Centrifugal Pumps

A case study utilizing centrifugal pump failure data is used as a comparative appraisal of reliability assessment between GRP, perfect renewal process (PRP) and non-homogenous Poisson process (NHPP). The underlying distribution for time to first failure for these pumps is assumed to follow the two-parameter Weibull distribution and the parameters for the models are estimated using maximum ...

Centrifugal pumps are common at many plants — Figure 1 shows a typical centrifugal pump and Figure 2 a complex multi-casing one for a high-pressure service. Unfortunately, plants often suffer unnecessary pump downtime. Operating conditions not mentioned in the pump order document and not considered in pump design and manufacturing account for more than 75% of all unscheduled shutdowns.
