Human-centered design (HCD, also human-centred design, as used in ISO standards) is an approach to problem-solving commonly used in design, management, and engineering frameworks that develops solutions to problems by involving the human perspective in all steps of the problem-solving process.Human involvement typically takes place in observing the problem within context, brainstorming ...

Human-centered design - Wikipedia
For standard tools, the typical ratio between the cutting diameter and the diameter of the shaft is 2:1, limiting the cutting depth. When a non-standard undercut is required, it is a common practice for machine shops to manufacture their own custom undercut tools. This can add to the lead time and cost, so it should be avoided if possible.
